Acceptance of Components in end products

ULC procedures for acceptance of components in end products submitted for National Certification on the basis of a CB Test Reports & Certificate are governed by the following criteria:

1. Declared National Differences in the respective Canadian end-product standards and component standards, and
2. Information declared by ULC in the Component Matrix on the IECCE website.

Where a UL/ULC Listed or Recognized component is required, ULC is prepared to test a component that is not UL Listed or UL Recognized as part of the end-product investigation to the applicable component and end-product requirements.

Sincerely,

UNDERWRITERS LABORATORIES OF CANADA
