

## Acceptance of components in end-products

OVE - Austrian Electrotechnical Association

2010-04-06

The acceptance of components in end-products by OVE is based on the following criteria:

1. Components certified by other members of the CB-Scheme according to relevant IEC standard taking into account the European common modifications (EN Group Differences) and any declared national differences.
2. Components provided with a Certificate and/or Mark of Conformity which assures the agreed level of surveillance.
3. In other cases the decision on further testing of the component will be based on the documentation submitted (e.g. CBTC and TR without national differences or National License with/without TR or Test Report).
4. In addition OVE is prepared to test components without documentation as mentioned above as part of the end-product investigation to the applicable component and end-product requirements.
5. Surveillance of critical components forms part of the yearly factory inspections of the end-product.
